1 Introduction

Intercalculator is a software application designed for performing mathematical calculations. The project was created as part of the IVS (Practical Aspects of Software Development) course at FIT VUT. The goal is to provide you, the user, with a simple yet accurate tool for any kind of calculation.

2 Key Features

The Intercalculator application supports the following mathematical operations and functions:

- **Keyboard input support**
- **Addition** ($a + b$)
- **Subtraction** ($a - b$)
- **Multiplication** ($a \cdot b$)
- **Division** (a/b)
- **Natural logarithm** ($\ln(x)$)
- **Factorial** ($n!$)
- **Exponentiation** (x^n)
- **Root** ($\sqrt[n]{x}$)
- **Parentheses support**

3 Operating System

The calculator is intended for the following operating systems. No development or testing has been done for others.

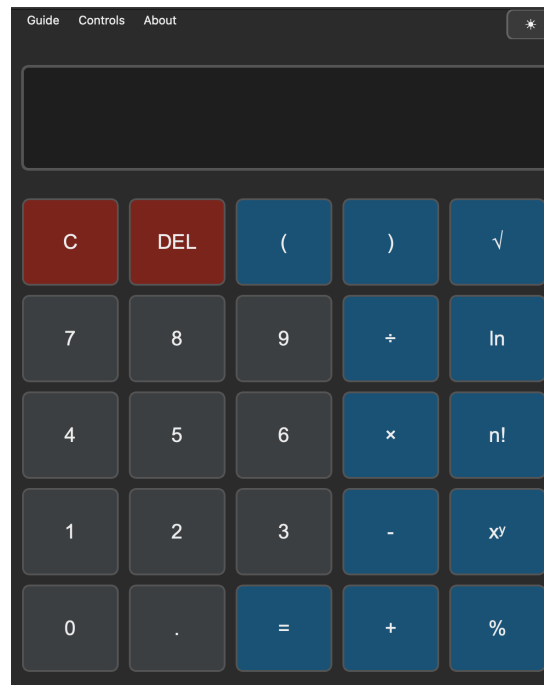

- Windows 10/11
- macOS 15+
- Ubuntu 24.04+

4 Graphical Interface

Light mode

Dark mode

5 Controls

Keyboard shortcuts:

- 0-9, +, -, *, /, %, ^, (,) : Standard input
- . or , (comma) : Decimal point
- ! (exclamation mark) : Factorial ($n!$)
- S : Root ($\sqrt[n]{base}$)
- L : Natural logarithm ($\ln$)
- Enter or Return : Calculate (=)
- Backspace : Delete last character (DEL)
- Escape or Delete : Clear the entire display (C)

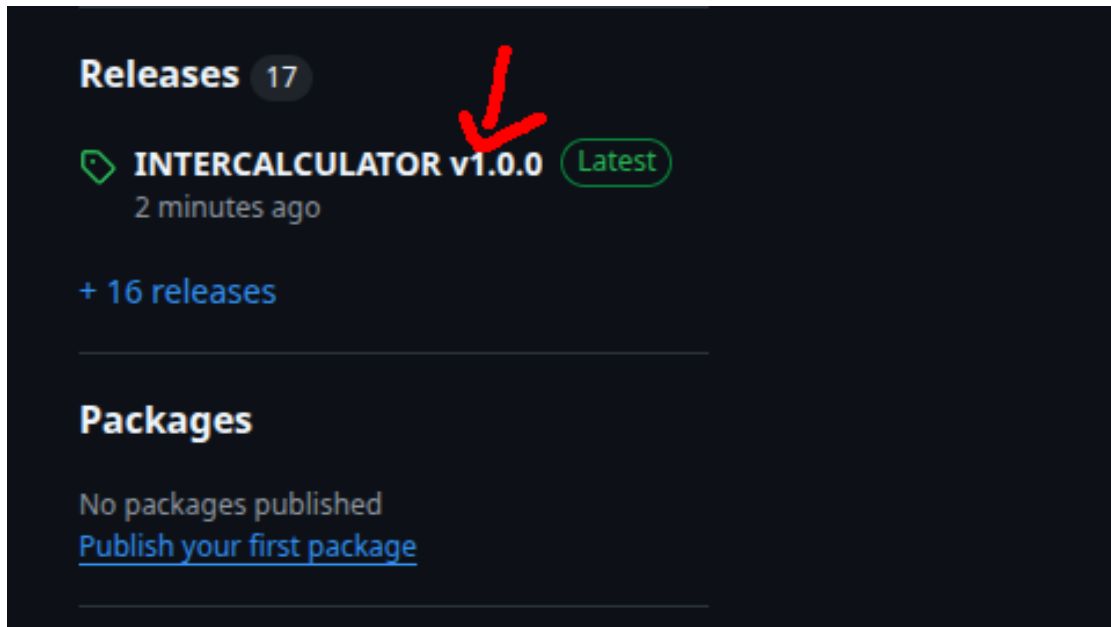

System functions:

- Ctrl+H : Open help (Guide)
- Ctrl+M : Toggle dark/light mode
- Ctrl+K : Open controls (Controls)
- Ctrl+I : Open application info (About)

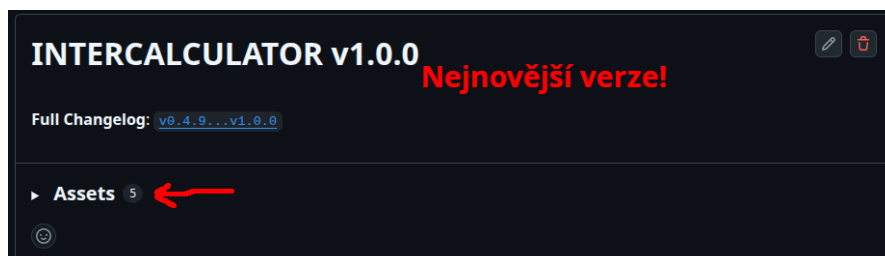

6 Installation

The following steps describe the process of installing the application from GitHub.

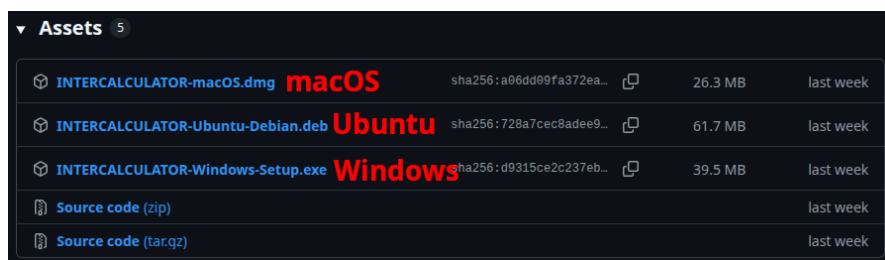

Step 1: Download the installation package from the repository.

Step 2: Identify the latest version.

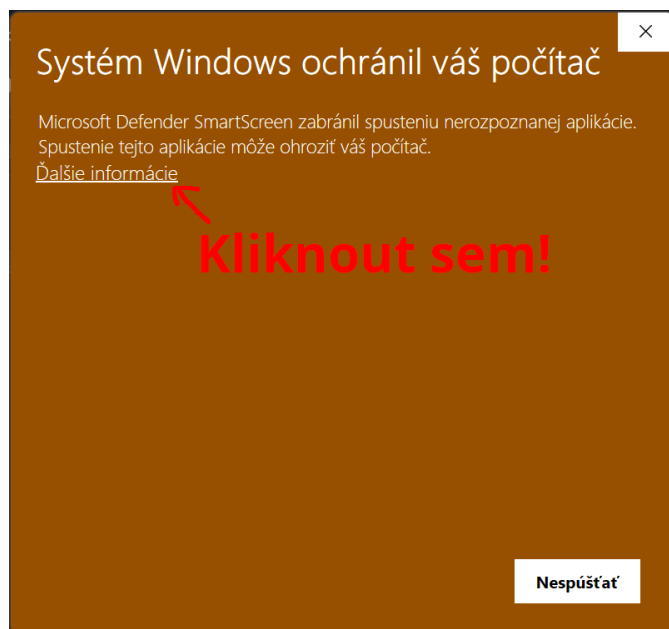

Step 3: Download the correct package.

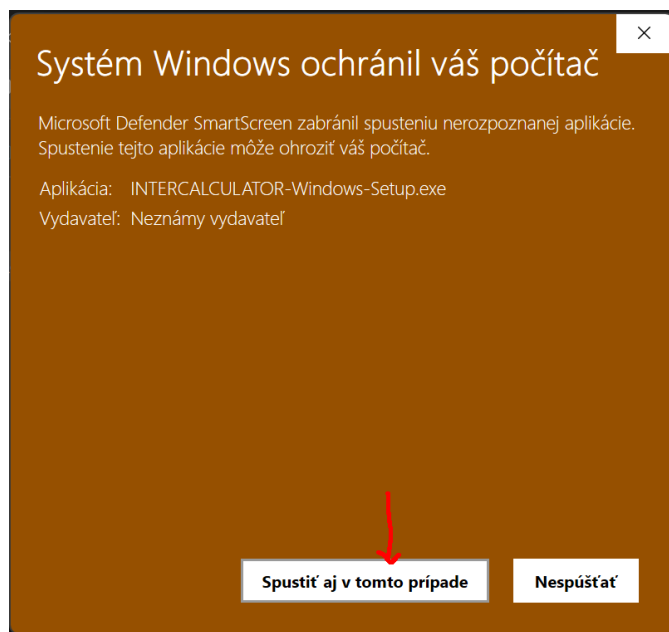

6.1 Windows

Step 1: In case your computer flags the application as harmful (there is no need to worry):

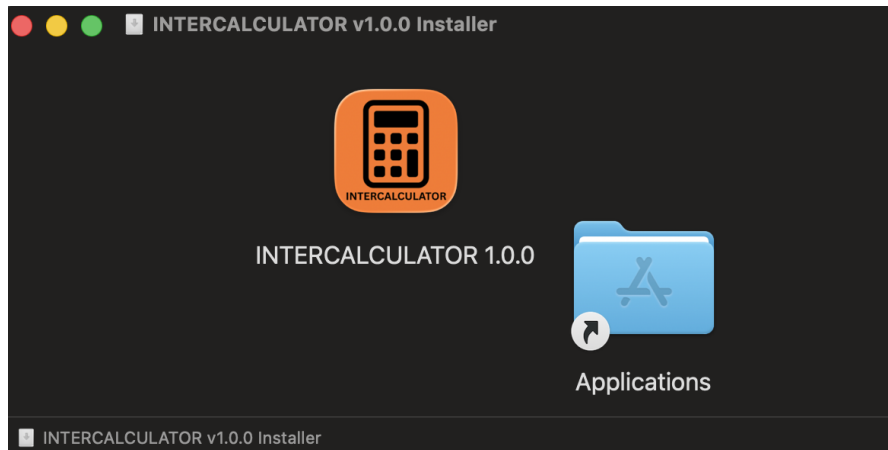

Step 2: Confirm the security exception.

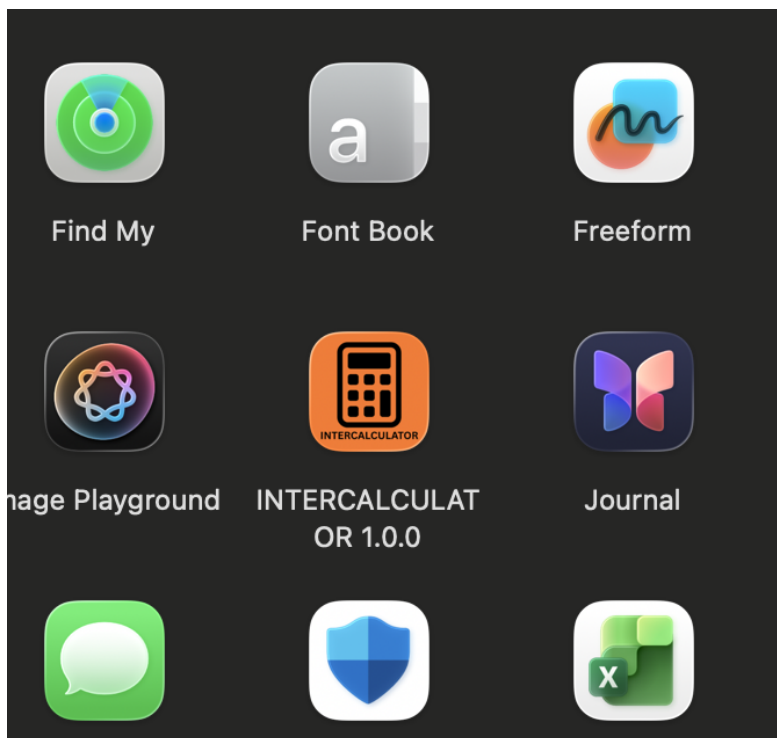

Step 3: Complete the installation wizard.

6.2 macOS

Step 1: After downloading the .dmg file, open it and drag the application into the Applications folder.

Step 2: The application is now in the Applications section and can be launched.

Note: A security exception may appear on launch. In that case, go to *System Settings* → *Privacy & Security* to allow it.

6.3 Ubuntu

6.3.1 Via Terminal

Step 1: From the terminal, install the package with:

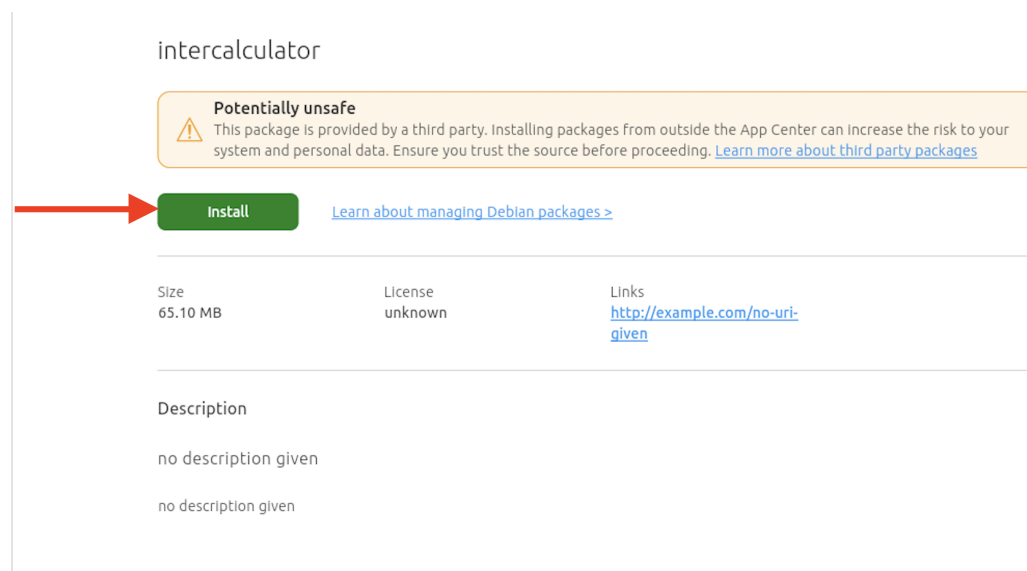

```
$ sudo apt install ./INTERCALCULATOR-Ubuntu-Debian.deb
```

Step 2: To launch the application, simply type:

```
$ intercalculator
```

6.3.2 Via App Center

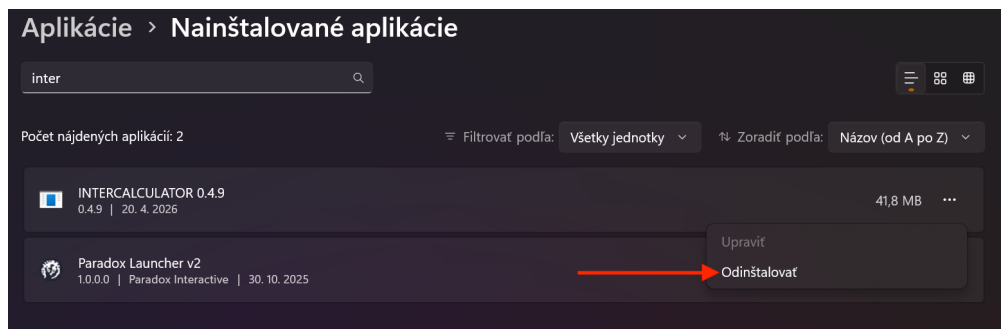

Step 1: After opening the .deb package, simply click the install button.

7 Uninstallation

7.1 Windows

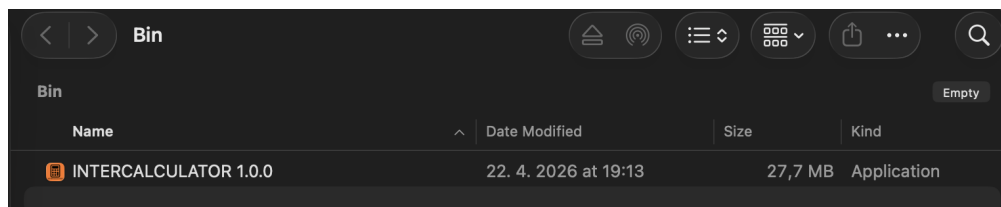

Step 1: In the Windows search bar, go to Apps → Installed Apps, search for *Intercalculator*, and uninstall it.

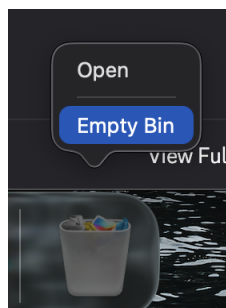

Step 2: Complete the uninstallation wizard.

7.2 macOS

Step 1: Drag the application from the Applications folder to the Trash.

Step 2: Empty the Trash.

7.3 Ubuntu

Step 1: To uninstall, simply enter the following in the terminal:

```
$ sudo apt remove intercalculator
```
